

Patchsave Solutions Limited Environmental Policy Statement

Patchsave Solutions resell IT Cabling and Cable Management products to both corporate and public sector organisations across the UK. Our team provide quality, choice and innovative cable options, either by sourcing locally via UK distribution, or importing directly from global manufacturers.

All staff have made a commitment to ensure that Patchsave Solutions is committed to protecting the environment throughout our business activities, including the products and services that we provide to our customers. This is achieved by sourcing products in a responsible manner, taking in to account the lifecycle perspective of the supplied products and ensuring that our day-to-day operations use resources efficiently.

As a Company we continually monitor and review, ensuring that legislation is met, and that our environmental objectives are implemented and maintained long term. Our environmental management system is designed to satisfy all interested parties by highlighting good risk management, emergency procedures and regular training in sustainability.

Our initiatives include the separation and correct disposal of waste, continued reduction of plastic product packaging, limiting logistics to reduce our carbon footprint and improving stock control processes to reduce unsold inventory.

This policy statement is displayed on site and is publicly available upon reasonable request by any interested party.
