Slim Small Diameter Cat6a Patch Cables

Our new range of [small diameter Cat6a snagless patch cables](#) are a perfect choice for (10Gigabit) high density patching.

It's slim 4.5mm 30AWG cable thickness is 30-40% smaller than our [standard Cat6a patch cables](#), this in turn reduces the amount of valuable rack space and need for extra cable management.

What really makes this new Cat6a slim patch cable stand out from the crowd is a core focus around the environmental impact.

This has been carefully considered in both the manufacturing process by using less raw materials with its slim design, but also around the packaging.

Each cable is provided coiled without packing to aid with quicker installs and to also help protect the Environment from plastic waste.

Our Cat6a small diameter patch cord range are available in 10 colours [Grey](#), [Green](#), [Blue](#), [Red](#), [Yellow](#), [Black](#), [White](#), [Orange](#), [Purple](#) and [Pink](#).

Helping you to build that smarter unified network with immediate visual colour identification of hardware and applications.

Smaller lengths such as 0.25 metre and 0.3 metre are available for short length switch port to panel replication and then more unusual lengths including 1.5 metre, 2.5 metre and 4 metre lengths for inter rack equipment patching.

Additional to all these great features we have also ensured the cable length is clearly printed on the underside of both end boots, so easy for storage future reuse, taking full advantage of its life time guarantee.
