Patch App & Go Network Tester & Trace

Patch App & Go T1 is the one man Data Continuity Tester and Cable Tracer, powered by any mobile device running on android or IOS.

Download the app to your device and testing of any LAN cable becomes a quick and easy process.

The Patch App & Go T1 is suitable for testing [Cat 5e](#), [Cat 6](#), [Cat 6A](#), unshielded and shielded network cables.

As the device performs each test the results will appear as a pass or fail on your mobile device.

When a fail is reported, the app will instantly display errors such as mis-wires, split pairs, shorts and open ends.

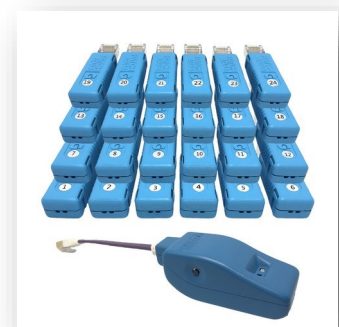

Tracing unidentified network cables has also been made simple with Patch App & Go.

By inserting the Smart Remote Plugs into the ports of a Patch Panel, Patch App & Go will send a trace through the cable to the uniquely numbered Smart Remote Plug, notifying the user of plugs ID, allowing the user to correctly label the link.

Patch App & Go Continuity Tester eliminates the need and additional expense of having two men on site to carry out testing, or the time consuming method of testing by yourself.

Test up to 24 ports in quick succession before having to relocate your Smart Remote Plugs.
